hi guys....

I am back. I tested this assembly yesterday. And have done so for several years now. It is in good working order as before, but I had lighting this years as not before. It seems that they have a 1/2" hose take-off on the supply side of their backflow. And I do not think they should. It looks new, but I do not think it is. If you want that plugged I would like for you to tell them that, and I will fix it labor free.

thanks

frank.
