Good morning.

My name is Michael Martinez and I am a 9th grader at Blue Ridge Early College. I'm in Mr.Littlefield's science class and my end of year research topic is fresh water in Jackson County.

I had a few questions that I hope you can help me with:

- 1) How did TWASA get established?
- 2) Is Jackson County unique or among most counties in having a board like TWASA?
- 3) Would you consider it the best solution for the county's water treatment or should we consider a change?
- 4) What are the plans for water and sewage treatment in the Cashiers Area?
- 5) What percent of homes use Septic vs Sewage, and are there plans to centralize sewage or have distributed treatment centers?
- 6) Where does Blue Ridge School's water waste go?
- 7) When will Blue Ridge get rid of the water tower?

Thank you so much for your help. My project is due Friday, so any information is helpful. Links to any other resources are appreciated. Thank you for your service.
