At Emory University the LPR system we use searches equivalents of similar looking
letters and numbers and compares them to the database reducing unwanted hits.
Systems can also be set for specific states but this does not work when you have a wide
range of states represented in your lots.
Your vendor should be able to help you dial in your system to work the way you want.
That said, they are probably happy with a 10% misread rate although I find ours to be
closer 7 or 8%.

Let me know if you want to talk more about LPR.
