```
All,

Here at Texas Tech we use software that was built in-house and is now it's own company.
It's called NuPark.  It has exactly what some have talked about needing.  One, it's an
all in one type of software.  Full integration with pay stations, ticket writing
software, revenue controls, back office, etc.  Two, it was built for LPR integration.
That was the reason we went in-house because T2 couldn't do what we needed when we went
with LPR about 4 years ago.  We worked with Genetec on integration, and have had nothing
but great success.  If anyone would like more information, contact
kevin.uhlenhaker@nuparkonline.com and he will get you what you need.
